About the Presenter

Larry Rambeaux | Senior Account Representative

Larry has over 20 years' experience working with heavy duty fleets. He is an outstanding trainer and uses his extensive experience to help his customers make the best choices for their electrical needs.

He has been awarded the prestigious Recognized Associate Award from the Technology & Maintenance Council. Larry's knowledge of electrical systems enables him to help his customers identify and remedy a fleets' electrical issues.

Pre-Check Multimeters

Replacing Fuses

.400 mA Fuse

10A Fuse

Using In-Line Ammeter

Pretesting with a 10 amp fuse

Remove the ground at the battery and place a 10 amp fuse assembly in series. If the fuse blows the current level is over 10 amps. DO NOT place your meter in this circuit, it will blow the internal meter fuse.

Using In-Line Ammeter

Pretesting with a 10 amp fuse

Move the red lead to the 10 amp connector hole and turn the rotary switch to amp “DC”. Place the red lead on the terminal of the cable and place the black lead on the battery post.

Using In-Line Ammeter

In this example, 2.53 amps flow from the battery to the light, then through the light to the read lead. The current then flows through the meter, then back to the battery through the black lead.

Using In-Line Ammeter

Pretesting with a 10 amp fuse

If the ammeter reads 0 to .40, you may have the range set too high. To protect the meter from surges insert the fuse assembly between the cable connection and the batter ground.

Move the red lead to the 400 mA connector hole and turn the rotary dial to “mA”. Remove the test fuse and read the display.

Remember the meter is reading milliamps. A 25 on this scale means 25mA, which equals .025 amps.

Using In-Line Ammeter

- 1 mA = .001 Amps
- 400 mA = .4 Amps

Using In-Line Ammeter

This is a very small amount of current. Be sure to use care when the meter is in this range. DO NOT open the tractor's door or turn on any loads that exceeds .4 amps because it will blow the 400mA fuse.

Magnetic Flux

Continuity Test – (beeps)

- If all but one of the strands are broken it will still show continuity.
- It will not handle the current load.

Meter Cheat Sheet

METER REFERENCE SHEET

$X > 10$ value of x is greater than 10
 $X < 10$ value of x is less than 10
 $X \geq 10$ value of x is equal to or greater than 10
 $X \leq 10$ value of x is equal to or less than 10

Voltage Drop Calculations

m = Thousandth Part... 10^{-3} (.000)

Voltage and Amperage Calculations

k = Thousand Fold..... 10^3 (1,000)

M = Million Fold..... 10^6 (1,000,000)

EXAMPLES

3.15 M Ω	=	3.15 Ω	x	10^6	=	3,150,000 Ω
0.85 M Ω	=	0.85 Ω	x	10^6	=	850,000 Ω
21.02 M Ω	=	21.02 Ω	x	10^6	=	21,020,000 Ω
26.32 k Ω	=	26.32 Ω	x	10^3	=	26,320 Ω
2.156 k Ω	=	2.156 Ω	x	10^3	=	2,156 Ω
0.952 k Ω	=	0.952 Ω	x	10^3	=	952 Ω
3.4 Ω	=	3.4 Ω	x	1	=	3.4 Ω
28.6 Ω	=	28.6 Ω	x	1	=	28.6 Ω
