

AUTO EJECT

Automatically ejects the shore power plug from the vehicle when the brake is engaged

The SAFEX system allows fleets to safely and easily connect their vehicles to 240/480 VAC power while at the dock (meeting CARB and other environmental regulations).

The Auto Eject component is an automatic disconnect that detects when the brake is engaged in the tractor and automatically ejects the power cord so the driver does not drive away with shore power still connected.

SAFEX SYSTEM COMPONENTS

- ① Auto Eject ② Auto Safe ③ Cable Management

AUTO EJECT FEATURES

- Allows for 480 V, Level 3 shore power or 240 V, Level 2 shore power to a vehicle
- Ejects the plug from the receptacle when the brake is engaged, eliminating drive-off damage
- Eliminates terminal arcing by waiting to energize the Auto Eject until the detector pin senses the plug is connected
- Utilizes the IEC (International Electrotechnical Commission) standard 4-pin pin-and-sleeve connector to provide a reliable connection over years of use
- Protects the mechanism from road contamination using weatherproof, watertight cable fittings
- Includes a smooth sculpted cover with no sharp edges
- Snaps the weatherproof cover closed when the plug is ejected
- 250,000+ installations in critical public safety applications*
- 25+ years of exemplary track record in North America and Europe*
