

# AUTO SAFE

Automatically disconnects shore power when not connected to the vehicle

The SAFEX system allows fleets to safely and easily connect their vehicles to 240/480 VAC power while at the dock (meeting CARB and other environmental regulations).

The Auto Safe is designed to protect personnel from electric shock while providing 240/480 volt shore power to a vehicle. Whenever the plug is removed from the socket, the Auto Safe automatically disconnects the power, ensuring safe interaction with the cable at all times.

## SAFEX SYSTEM COMPONENTS

- 1 Auto Eject
- 2 Auto Safe
- 3 Cable Management

## AUTO SAFE FEATURES

- Ensures the 240/480 volt shore power line is de-energized unless connected to the vehicle
- Applies power only if the plug is connected to the socket and the power button is activated
- De-energizes the plug automatically when the plug is ejected from the vehicle
- Uses a rugged enclosure that meets NEMA and IP67 standards for ultimate outdoor protection
- UL listed 480 VAC system
- Easy to install
